COURSE PRACTICAL ASSESSMENT

WEB PROGRAMMING: THE DAILY CRUST BAKERY

Format: In-Class Practical
Submission: Live Browser Output

1. FOLDER STRUCTURE & SETUP

Create a single project directory named `daily-crust-bakery` on your computer. Inside this folder, create the three required project files exact to the layout below:

```
daily-crust-bakery/ ├── index.html ├── style.css └── script.js
```

GENERAL INSTRUCTIONS & RULES

- **Academic Integrity:** All code must be written by you during the assessment.
- **No AI Assistance:** Use of AI code generators (e.g., ChatGPT, Copilot) or copying pre-written templates is strictly prohibited. You may reference standard online documentation (MDN) or class notes for syntax rules.
- **Demonstration:** When finished, raise your hand and open `index.html` in a browser to demonstrate your working output to the instructor.

2. ASSESSMENT TASK

Develop a functional, clean 1-page website for a small local business named **"The Daily Crust Bakery"** using HTML, CSS, and basic JavaScript.

3. TECHNICAL REQUIREMENTS

Part A: HTML Structure (`index.html`)

- **Header:** Bakery name and top navigation links for *Menu*, *About Us*, and *Hours*.
- **Hero Section:** Main heading (<h1>) welcoming visitors and a short introductory paragraph.
- **Menu Highlights:** A dedicated section displaying at least 3 items (e.g., Croissant, Chocolate Cake, Sourdough Bread) using heading and list tags.
- **Footer:** Closing bar with copyright text and your full name.

Part B: CSS Styling (`style.css`)

- **Typography & Color:** Choose a clear readable font family and an appetizing color scheme (e.g., warm browns, creams, soft neutral accents).
- **Layout:** Format navigation links and content blocks using CSS layout techniques (such as Flexbox).
- **Hover Effect:** Include CSS hover states on navigation links or interactive buttons.

Part C: JavaScript Interactivity (`script.js`)

- **Interactive Feature:** Add a button that modifies DOM content when clicked (e.g., displaying today's special item or showing a custom welcome message).

4. SUBMISSION

Verify that `style.css` and `script.js` are correctly linked inside `index.html`. Launch your `index.html` file in a web browser to present the final result to your instructor for evaluation.
